

Sex Linked Traits Punnett Squares

Directions: Complete the following problems by doing the punnett square for each cross and answering the question asked.

1. Complete a punnett square for the cross between a human female (XX) and a human male (XY). What is the chance that the parents will have a girl?

2. If the same parents have four boys, what is the probability their fifth child will be a girl?

Hemophilia is a recessive sex-linked disease carried on the X chromosome in humans.

3. Write the genotype of a woman who does not have hemophilia. _____
4. Write the genotype of a woman with hemophilia. _____
5. Write the genotype of a woman who is a carrier (heterozygous) for hemophilia. _____
6. Write the genotype of a man who has hemophilia. _____
7. Write the genotype of a man who does not have hemophilia. _____

8. A woman who is heterozygous for hemophilia marries a normal male. What are the possible phenotypes of their children?

9. A woman who is a carrier for hemophilia marries a man with hemophilia. Could any of their children have hemophilia? If so, would the child be male or female?

Directions: Complete the following problems by doing the punnett square for each cross and answering the question asked.

1. A woman with hemophilia marries a man who does not have hemophilia.
What are the possible phenotypes of their children?

2. A woman without hemophilia marries a man with hemophilia. They have a daughter with hemophilia. What is the genotype of the mother and father?

Colorblindness is a sex-linked recessive trait in humans.

3. Write the genotype of a woman who is not colorblind. _____

4. Write the genotype of a woman who is colorblind. _____

5. Write the genotype of a woman who is a carrier (heterozygous) for colorblindness. _____

6. Write the genotype of a man who is colorblind. _____

7. Write the genotype of a man who is not colorblind. _____

8. A colorblind man marries a female who is a carrier for colorblindness.
What is the probability that they will have a child who is colorblind?

9. A colorblind male marries a female who is not colorblind (homozygous).
What are the possible phenotypes of their children?
